

Programming Assignment 0: Self-Assign Potential Papers

Due January 30, 2023

In the [repository](#), you'll find a csv file with potential papers ('Papers/papers.csv'). You should assign yourself to two or three papers, by putting your name in the appropriate rows. Once you have completed this step, you should save the file, commit your update, and push to master.

Ordinarily, development should be done on a separate (development) branch, but for this assignment there should be little harm in working in the main branch. Note, that you should *pull* as soon as you're ready to make your changes, to minimize the possibility of a conflict between your changes and somebody else's.

You are welcome to add other papers to this list, if there is one you are particularly interested in going through, but note that your self-assignment does not (yet) constitute a final decision.

Finally, under 'StudentDirectories' folder, you should create folder into which you will submit future assignments. For now, this folder will be empty, but it doesn't hurt to get it ready for (future) population.
